

Color Folders: Usage

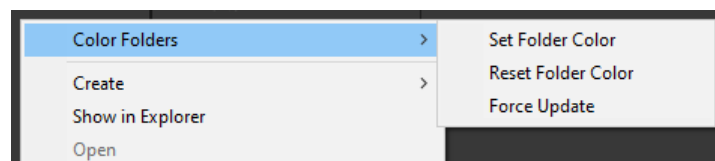

Limitations

This module removes the differing icons based on if a folder is open or empty to apply the color effects.

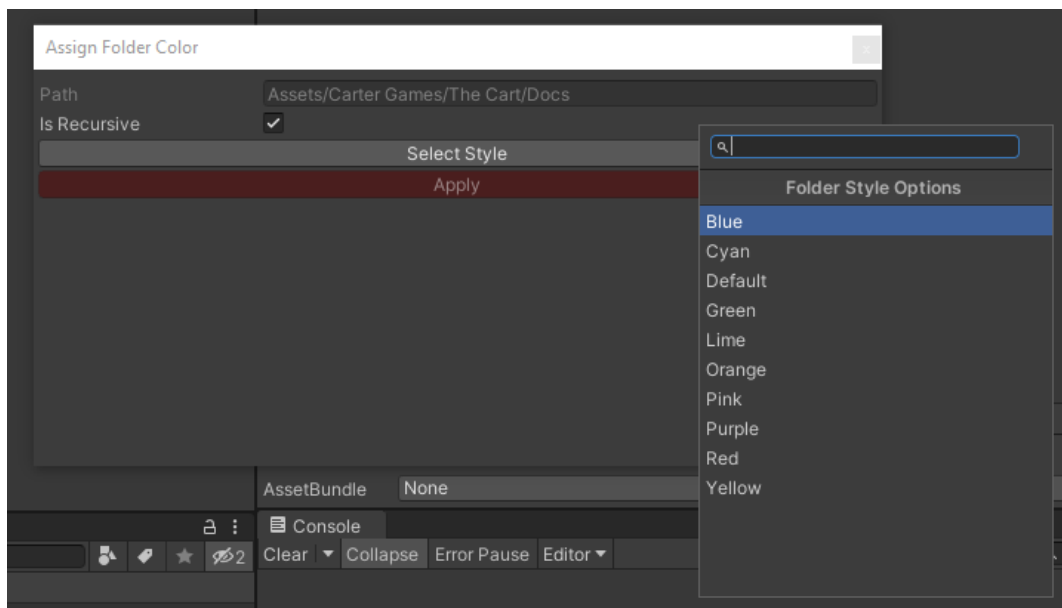

Apply a color to a folder

To apply a color, select the folder you want to color and right-click to open the context menu. Then navigate to the **Color Folders** option and select the **Set Folder Color** option.

You can also reset a folder color from this menu should you want to revert a color. Note this may only work on the folders you originally colored.

Once pressed you'll get a popup where to can choose if the color should apply recursively, so it all folders underneath unless overridden with another color change. You will need to select a style to apply a color to the folder. Select from the styles by pressing the select style button and selecting an option. Once done, press apply to change to color.

A reference of all the folder color looks below:

Blue

Cyan

Green

Lime

Orange

Pink

Purple

Red

Yellow
